Carbon Reduction Plan

Supplier name: Bowmed Ibisqus Ltd

Publication date: November 2026

Commitment to achieving Net Zero

Bowmed Ibisqus Ltd is committed to achieving Net Zero emissions by 2050.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2024	
Additional Details relating to the Baseline Emissions calculations.	
We have set a boundary for Upstream Transportation and Distribution emissions from the point they arrive in the UK. Employee Commuting includes working from home emissions.	
Baseline year emissions: January - December 2024	
Emissions	**Total (tCO_2e)**
Scope 1	**0.43**
Scope 2	**1.01**
Scope 3 (Included Sources)	3.1 Purchased Goods and Services -**1.51** 3.3 Fuel and Energy Related Activities – **0.63** 3.4 Upstream Transportation and Distribution – **138.9** 3.5 Waste Generated in Operations – **1.77** 3.6 Business Travel – **20.22** 3.7 Employee Commuting – **13.21** 3.9 Downstream Transportation and Distribution – **41.49** Total – **217.71**
Total Emissions	**219.15 tCO2e**

Current Emissions Reporting

Reporting Year: January - December 2025	
Emissions	**Total (tCO_2e)**
Scope 1	**0.41**
Scope 2	**0.33**
Scope 3 (Included Sources)	3.1 Purchased goods and Service – **0.02** 3.3 Fuel and energy related activities – **0.41** 3.4 Upstream Transportation and Distribution – **131.83** 3.5 Waste Generated in Operations – **0.68**

	3.6 Business Travel – **15.04** 3.7 Employee Commuting – **10.36** 3.9 Downstream Transportation and Distribution – **32.82** Total – **191.16**
Total Emissions	**191.89 tCO_2e** Comment: Bowmed Ibisqus' reported carbon footprint reduced from 219.15 tCO_2e in 2024 to 191.89 tCO_2e in 2025. Upstream transport remains the largest source of emissions, accounting for 68.7% of the 2025 footprint. Our focus will remain on improving emissions data, monitoring our progress annually and assessing lower-carbon logistics options as commercially viable alternatives become available. During 2025, we reviewed the methodology for Purchased Goods and Services. Certain low-materiality data included in the 2024 calculation was not repeated in 2025 because the resource required is disproportionate to its contribution to the overall footprint; we will review again in 2026.

Emissions Reduction Targets

The carbon emissions for 2025 have been verified by a third party and include all carbon emissions from factory gate to our wholesale warehouse. The boundary was set in consultation with Auditel who provide the verification process.

Upstream transport accounts for 68.7% of our carbon emissions. As the decarbonisation of transport improves, our emissions will decrease.

Carbon Reduction Projects

Completed Carbon Reduction Initiatives

- 100% renewable electricity at head office
- Biomass heating at head office
- Annual carbon footprint measurement and independent verification
- Measurement of upstream and downstream logistics emissions
- Monitoring of business travel, employee commuting, home working and waste
- Overall reported footprint reduced from 219.15 tCO_2e to 191.89 tCO_2e

Future Focus

- Continue annual carbon reporting and verification
- Improve the quality and coverage of emissions data
- Review the Purchased Goods & Services methodology as planned
- Monitor lower-carbon logistics options
- Adopt lower-carbon transport solutions where commercially viable
- Measure future progress against the established baseline
- Review the inclusion of third-party warehouse storage emissions to improve reporting completeness

Declaration and Sign Off

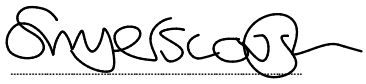

This Carbon Reduction Plan has been completed in accordance with PPN 006 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard[13] and uses the appropriate government emission conversion factors for greenhouse gas company reporting.[14]

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements (where required), and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.[15]

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:

Susan Myerscough
